PROJECTS

Intelligent Quiz Management & OCR System July 2025 – Present
Python, Node.js, React, MongoDB, Groq AI

- Built an automated exam grading platform using computer vision OCR to extract questions and handwritten student answers from scanned PDFs.
- Engineered a cross-page reconstruction algorithm using overlapping bridge images to handle questions split across page boundaries.
- Implemented multi-type grading engine (MCQ, Fill-in-the-blank, subjective) using LLMs for semantic evaluation.
- Developed a Question Bank with auto-calculated difficulty ratings via statistical analysis of performance.

MERN Stack E-Commerce Platform July 2024 – Dec 2024
MongoDB, Express.js, React, Node.js, Redux

- Architected a full-cycle e-commerce solution with product browsing, cart management, and secure checkout.
- Built an Admin Dashboard for managing products, tracking orders, and configuring discount systems.
- Implemented secure user authentication and payment tracking for a seamless end-to-end workflow.

Brain Tumor Detection using CNNs July 2024 – Oct 2024
Python, TensorFlow/Keras, Flask, OpenCV

- Developed a CNN-based deep learning model to detect brain tumors from MRI scans.
- Applied data augmentation to improve model generalization and diagnostic accuracy.
- Deployed via a Flask web application providing a user-friendly medical image analysis interface.
